

Badr Eddine ELBOUAMRI

Industrial Systems Mechanical Engineer specialising in Lean Manufacturing and continuous improvement. Hands-on operational experience in the automotive and metallurgy industries. Strong interest in industrial performance optimisation, process reliability, and Industry 4.0.

PROFESSIONAL EXPERIENCE

Stellantis – Kénitra | Continuous Improvement Engineering Intern (PFE)

Feb 2026 → Jul 2026

Project: Transformation cost (TC) control for the Micromobility workshop through a DMAIC approach — scrap reduction on line L2 and sealing reliability at station ST40.

Missions & Achievements:

- Brought a transformation cost drifting from its budget target to a **33.8 % reduction** in scrap cost, through a DMAIC approach on line L2.
- Root-cause diagnosis of scrap (FMEA, Pareto, Ishikawa, 5 Whys) on the robotized adhesive-application and forming cell.
- Addressed sealing defects and implemented a standardized early-rework workstation. Designed a Power BI dashboard for scrap monitoring and a web application for consumables management.

Tools & Methods: DMAIC, QOQCCP, SIPOC, FMEA, Pareto, Ishikawa, 5 Whys, Power BI, Excel, web development.

AIC Métallurgie (Delta Holding) – Kénitra | Diagnostics & Maintenance Engineering Intern (PFA)

Jun 2025 → Jul 2025

Project: Diagnosis of bending and rolling machines.

Missions & Achievements:

- Analysis of recurring failures and calculation of rolling forces for bending and rolling machines.
- Proposed a preventive and corrective maintenance action plan.
- Recommendations to improve machine-fleet reliability and reduce production stoppages.

Tools & Methods: Preventive & corrective maintenance, mechanical diagnostics, rolling force calculation.

Nexteer Automotive – Kénitra | Continuous Improvement Intern (Introductory Internship)

Jun 2024

Project: Continuous improvement of tool performance in the CNC machine area.

Missions & Achievements:

- Analysis and optimisation of manufacturing processes, monitoring of cutting-tool and CNC machine performance.
- Proposed improvements to reduce tool wear and increase operational efficiency.

Tools & Methods: CNC machines, process optimisation, tool performance monitoring.

EDUCATION

2023–2026 — State Engineer Degree in Industrial Systems Mechanical Engineering.

2023–2026

- École Normale Supérieure de l'Enseignement Technique de Mohammedia (ENSET-M) — Université Hassan II, Morocco.

2021–2023 — Preparatory classes for the Grandes Écoles (CPGE) — TSI track.

2021–2023

- Lycée Salmane Al Farissi, Salé, Morocco.

2021 — Baccalaureate — Electrical Sciences and Technologies.

2021

- Lycée Technique Ibn Sina, Kénitra, Morocco.

ACADEMIC & PERSONAL PROJECTS

Project: Smart IoT Irrigation System (ESP32, MQTT, OpenWeather).

Tasks:

- Design of an automated, connected irrigation system with weather prediction.
- Remote supervision for optimised water-consumption management.

Project: CATIA V5 training for engineering students — ENSET Mohammedia.

Tasks:

- Organised and led an intensive training session on CATIA V5 to build proficiency with this design tool.

PERSONAL SKILLS

- Analytical thinking and problem-solving
- Autonomy, rigor and sense of responsibility
- Teamwork, effective communication and emotional intelligence
- Adaptability and technical curiosity
- Continuous learning and organisational skills

LANGUAGES

Arabic

native language

French

fluent

English

fluent

TECHNICAL SKILLS

- 2D/3D drawing reading, technical drawing, mechanical design and manufacturing.
- Process control, routing sheet validation, industrialisation and KPI monitoring.
- FMEA analysis, problem-solving (8D, Ishikawa) and Lean Manufacturing (Kaizen, 5S).
- Thermal machines, heat transfer, fluid mechanics and renewable energy.

SOFTWARE

Design & Simulation: CATIA, SOLIDWORKS, CES EduPack, AutoCAD, ANSYS, ABAQUS, DIGIMAT

Office & Data Analysis: Excel, Word, PowerPoint, Access, Power BI

Programming & Analysis: Python, MATLAB, C, C++, VBA
